^ Wage Order No. NCR-27 provides for an ₱85 increase in the daily minimum wage, to be implemented in two tranches (₱60 effective 25 July 2026 and ₱25 effective 20 January 2027). However, implementation of the wage order remains suspended pending resolution of the related court cases. Accordingly, the minimum daily wage remains at ₱695.

FOOTNOTES:

1 The PSA released the Revised and Rebased to 2018 National Accounts of the Philippines (NAP) on 20 April 2020. The salient features of the revision and rebasing are as follows: adoption of the 2008 System of National Accounts (SNA) recommendations and latest classification systems (i.e., 2009 Philippine Standard Industrial Classification, 2015 Philippine Standard Commodity Classification, 2009 Philippine Classification of Individual Consumption According to Purpose, 2018 Philippine Standard Geographic Code); inclusion of new industries and expenditure commodities (i.e., information and communication, accommodation and food service activities, education, human health and social work activities, valuables, newly-highlighted export and import commodities); and updating of the base year to 2018.

2 Derived by dividing the peso Gross National Income (GNI) and Gross Domestic Product (GDP) at constant prices with the peso/US$ rate corresponding to the base year (i.e., P52.6614 in 2018).

3 Data are derived by dividing nominal per capita GDP/GNI in pesos by the implied Purchasing-Power-Parity (PPP) conversion rate of the International Monetary Fund World Economic Outlook (IMF WEO) as of April 2026. The GDP-PPP weights are based on the 2021 survey by the World Bank Group's International Comparison Program for new purchasing-power-parity benchmarks. Data on per capita GDP starting 2000 in the IMF WEO may differ slightly from the SEFI figures inasmuch as the latter is based on the revised historical Philippine Statistics Authority (PSA) numbers on national accounts as of November 2020.

4 Gross national saving in percent of GNI at current prices; per PSA's consolidated accounts as of June 2025.

5 Population estimates prior to 2009 are based on the PSA's population projections using the 2000, 1990 and 1980 Census of Population and Housing (CPH) data. Figures for 2009-2011 are the PSA's estimates using the 2000 and 2010 CPH as start and end dates of the reference population. Figures for 2007 to present are estimates by the DES staff based on the revised and rebased to 2018 National Accounts data.

6 The Labor Force Survey (LFS) was originally conducted on a quarterly basis (i.e., January, April, July and October), with a sample size of approximately 44,000 households. From April 2016 to October 2019, the LFS adopted the population projections based on the 2010 Census of Population and Housing (CPH) and 2013 Master Sample (MS) Design. Beginning January 2020, the LFS results, including the final 2019 LFS, have been estimated using the 2015 Population Census (POPCEN) and 2013 MS. Starting February 2021, the monthly LFS has been conducted in between the regular quarterly LFS. The monthly LFS, with a sample size of approximately 11,000 households only, generates national level of labor and employment statistics without regional breakdown. However, the July 2021 LFS had regions as domain and covered 123,244 households.

7 Nominal wage rates refer to basic pay and cost of living allowance (COLA). The annual figures are as of December of the reference year. Meanwhile, real wage rates are nominal wage rates deflated using the 2018-based Consumer Price Index (CPI). Real wage rates prior to 2022 are estimated by BSP staff.

8 Starting with the January 2021 reference month, production and sales indices from the MISSI have been rebased to 2018, from the 2000 base period. The major changes in the rebasing are: (1) the industry structure or classification; and (2) the weights which measure the relevance of the industries. The industry classification for the 2018-based series follows the 2009 Philippine Standard Industry Classification (PSIC), while the 2000-based series adopted the 1994 PSIC. For the rebased series, the weights at the base year were computed based on the final results of the 2018 Census of Philippine Business and Industry (CPBI). Further, rebased estimates are available beginning 2018.

9 Effective 4 February 2022, the base year of the Consumer Price Index (CPI) has been updated from 2012 to 2018. The rebasing of the CPI is done periodically by PSA: (1) to ensure that the CPI market basket continues to capture goods and services commonly purchased by households over time; (2) to update expenditure patterns of households; and (3) to synchronize its base year with 2018 base year of the Gross Domestic Product and other indices produced by PSA.

10 On 27 June 2025, the BSP adopted the hedonic methodology for generating the Residential Property Price Index (RPPI). This shift aligns the RPPI with international best practices, replacing the Residential Real Estate Price Index (RREPI). By factoring in property-specific characteristics, such as location, size, and type, the hedonic method provides a more accurate measure of residential property price movements. The RPPI has been backtracked from Q1 2019.

11 All figures are as of end-period.

12 Computed as the share-price divided by earnings per share.

13 Using the chained geometric method and a basket of currencies of major trading partners of the Philippines - United States, euro area, Japan, Australia, China, Singapore, South Korea, Hong Kong, Malaysia, Taiwan, Indonesia, Saudi Arabia, United Arab Emirates, and Thailand, and baskets for Advanced Countries (United States, euro area, Japan and Australia) and Developing Countries (China, Singapore, South Korea, Hong Kong, Malaysia, Taiwan, Indonesia, Saudi Arabia, United Arab Emirates, and Thailand). Reference period is at 1980 = 100.

14 Based on the April 2026 World Economic Outlook (WEO) of the International Monetary Fund (IMF)

15 Data are based on the Balance of Payments and International Investment Position Manual, 6th Edition (BPM6).

16 BPM6-based trade in goods data are sourced mainly from the PSA's International Merchandise Trade Statistics (IMTS) and are adjusted to (1) exclude the value of goods that do not involve change in ownership such as goods for processing, returned/replaced goods, and temporarily held goods; and (2) include other goods not covered in the IMTS such as fish bought and caught in high seas, and goods procured in ports by carriers.

17 Personal remittances cover cash sent through banks and informal channels as well as remittances in kind. Personal remittances are computed as the sum of net compensation of employees (i.e., gross earnings of overseas Filipino (OF) workers with work contracts of less than one year, including all sea-based workers, less taxes, social contributions, and transportation and travel expenditures in their host countries), personal transfers (i.e., all current transfers in cash or in kind by OF workers with work contracts of one year or more as other household-to-household transfers between Filipinos who have migrated abroad and their families in the Philippines) and capital transfers between households (i.e., the provision of resources for capital formation purposes such as for construction of residential houses, between resident and non-resident households without anything of economic value being supplied in return).

FOOTNOTES (cont'd):

18 Balances in the financial account are derived by deducting net incurrence of liabilities from net acquisition of financial assets. Negative balances indicate net borrowing while positive balances indicate net lending.

19 Net FDI flows refer to non-residents' net equity capital (i.e., placements less withdrawals) + reinvestment of earnings + net balance of debt instruments (i.e. borrowings less repayments).

20 Net foreign portfolio investments (BOP concept) refer to non-residents' net placements in equity and debt securities issued by residents.

21 The balance of payments (BOP) position corresponds to the change in BSP-NIR that is purely due to economic transactions, excluding the effects of revaluation of reserve assets and gold monetization.

22 Number of months of average imports of goods, and payments of services and primary income that can be financed by reserves.

23 Refers to adequacy of reserves to cover outstanding short-term external debt based on original maturity plus principal payments on medium- and long-term external loans of the public and private sectors falling due in the next 12 months. Figures reflect data based on debt service schedule on outstanding external debt as of 31 March 2026 and outstanding short-term external debt as of 31 May 2026.

24 Covers debt owed to non-residents, with classification by borrower based on primary obligor per covering loan/rescheduling agreement/document.

25 The Business Confidence Index (CI) represents the overall business outlook of firms belonging to the SEC's Top 7000 Corporations of the Philippines. Starting Q1 2020, sample firms belong to the Top 7,000 Corporations ranked based on total assets from the Bureau van Dijk database. The index is computed as the percentage of firms with "improving" business outlook less the percentage of firms with "deteriorating" business outlook. Starting 2026, the conduct of the BES shifted from quarterly to monthly frequency.

26 The Consumer Confidence Index (CI) represents the overall outlook of consumers across three indicators: economic conditions, family financial situation and family income. The index is computed as the average percentage of households with "improving" outlook less the percentage of households with "deteriorating" outlook.

27 The Philippines' PMI produced by the PISM is based on monthly interviews of purchasing supply managers from top 500 - 600 manufacturing, services and wholesale and retail trade firms about the current market conditions. The overall index represents the weighted average of PMI across these sectors. Meanwhile, the PMI produced by S&P Global is based on monthly replies to questionnaires sent to purchasing executives in over 450 industrial companies. For all indices, an index above 50 indicates an expansion, and an index below 50 implies a contraction. Data are seasonally adjusted.

28 CPI for the bottom 30% income households measures the composite change over time of the retail prices of goods and services commonly purchased by households in this income category and provides a more appropriate deflator of income and inflator of food prices and other basic commodities for the lower-income group.

29 Poverty incidence refers to the proportion of families/individuals with per capita income/expenditure less than the per capita poverty threshold to the total number of families/individuals, i.e., P=(Q/n)*100, where Q=number of families/individuals with per capita annual income/expenditure less than the per capita poverty threshold, and n=total number of families/individuals. Estimates on poverty incidence were based on income data from the Family Income and Expenditures Survey (FIES). Meanwhile, poverty threshold refers to the minimum income/expenditure required for a family/individual to meet the basic food and non-food requirements.

30 Monthly treasury bill (T-bill) rates were computed based on the auction date by BSP staff, which differs from the monthly T-bill rates based on the issue date as computed by the Bureau of the Treasury (BTr)

31 Starting 1 January 2020, universal and commercial banks (U/KBs) are required to submit the amended reporting templates on banks' lending and deposit rates or Interest Rates on Loans and Deposits (IRLD) in accordance with Circular Nos. 1029 and 1037, series of 2019. Bank submissions with interest rates of 100% and above were excluded per account code from the computation per the Department of Supervisory Analytics (DSA) and Supervisory Policy and Research Department's (SPRD) definition of outliers. As such, IRLD data may not be consistent with the lending and deposit rates of U/KBs prior to 2020.

32 On 3 June 2016, the BSP adopted the interest rate corridor (IRC) to guide short-term market rates towards the BSP policy interest rate, which is the overnight reverse repurchase (RRP) rate. The interest rates for the standing liquidity facilities—the Overnight Lending Facility (OLF) and the Overnight Deposit Facility (ODF), form the corridor's upper and lower bound, respectively. In addition, the Term Deposit Facility (TDF) serves as the main tool for absorbing liquidity. On 8 September 2023, the BSP shifted to a variable-rate format with a pre-determined offer volume in the auction for the overnight RRP facility. In this regard, the BSP signals its monetary policy stance through the Target RRP rate. Also, the BSP introduced a formal operational target—the Overnight (ON) RRP rate. An operational target is a market-determined, short-term interest rate that central banks can guide on a day-to-day basis using their monetary instruments to reflect the prevailing monetary policy stance.

33 Beginning 18 September 2020, the BSP has offered BSP Securities as part of its initiative to shift to more market-based monetary operations. The inclusion of BSP Securities issuance in the standard monetary operations of the BSP provides an additional instrument for managing liquidity in the financial system and support the implementation of monetary policy under the Interest Rate Corridor (IRC) framework. For its initial offering, the BSP auctioned the 28-day BSP Bill with an indicative offer volume of Php 20 billion. On 30 June 2023, the BSP introduced the 56-day BSP Bill, with an initial offer volume of Php 20 billion, to expand the range of BSP's term instruments and increase the BSP's flexibility to respond to changing liquidity conditions while providing additional guidance to short-term market interest rate. The volume of offerings for the 28- and 56-day BSP Bills are announced two days before the auction.

34 Real interest rates are computed as the nominal interest rate less the inflation rate (2018=100).

35 Data are based on the Standardized Report Forms (SRFs), a unified framework for reporting monetary and financial statistics to the IMF.

FOOTNOTES (cont'd):

36 For items B-F, data are based on the Depository Corporations Survey (DCS) concept. The DCS is a consolidation of the balance sheets of the central bank and other depository corporations (ODCs) [consisting of universal and commercial banks (U/KBs), thrift banks (TBs), rural and cooperative banks (R/CBs), non-stock savings and loan associations (NSSLAs) and non-banks with quasi-banking functions (NBQBs)]. In the process, interbank loans, deposit transactions and other intra-system accounts between BSP and ODCs are eliminated, whenever possible.

37 Expanded liquidity (M4) is calculated by adding foreign currency deposits (FCDs) of residents to broad money (M3).

38 Data on real net claims were derived by multiplying the nominal value by the purchasing power of the peso using CPI (2018=100).

39 Gross NPL represents the actual level of NPL without any adjustment for loans treated as "loss" and fully provisioned.

40 Data on loan portfolio are gross of allowances to probable losses, unamortized discount/premium and net of amortization. Starting March 2023, digital banks were included in the computation of the Philippine Banking System.

41 Data on loans include interbank loans, reverse repurchase and loans and receivables – others, gross of allowance for credit losses. Meanwhile, deposits include peso and foreign currency deposits. Starting March 2023, digital banks were included in the computation of the Philippine Banking System.

42 Data are based on the Financial Reporting Package, wherein asset is reported as gross of allowance for probable losses and depreciation. Assets of Non-Bank Financial Institutions (NBFIs) are reported as gross of allowance for probable losses and net of depreciation while that of the BSP are net of allowance for probable losses and depreciation.

43 Data are based on NG Debt data compiled by the Bureau of the Treasury and posted on its website as of 3 September 2026, 4:00 pm. External debt refers to National Government (NG) obligations (i.e., loans and debt securities) that are issued or contracted abroad, typically under foreign jurisdictions or laws. The classification of debt is based on the place of issuance and applicable legal framework, rather than the creditor's residency or the instrument's currency denomination.

44 Compiled by the Department of Finance; Based on the Government Finance Statistics Manual (GFSM) 2014, public sector debt consists of the debt of all resident institutional units controlled directly, or indirectly, by resident government units—that is, all units of the general government sector and resident public corporations less intra-sectoral debt holdings. Per DES staff calculations, ratios to GDP were calculated using annualized GDP (i.e., sum of the data for the immediately preceding four [4] quarters). Data are based on the Outstanding Public Sector Debt downloaded from the DOF website on 29 January 2026, 4:00 PM.

45 Data are based on the NG Cash Operations data posted on the BTr website as of 27 August 2026, 2:00 PM. Indicators under "Sources of Financing the NG Deficit" follows the GFSM 2014 concept wherein reporting of debt amortization reflect the actual principal repayments to creditor including those serviced by the Bond Sinking Fund (BSF); while financing includes gross proceeds of liability management transactions such as bond exchange. Ratio to total NG surplus/deficit is computed using the absolute value of the NG deficit. A positive ratio for net domestic and/or external borrowings means that the NG's domestic and/or external borrowing contributed to financing the deficit, or in the case of a surplus, formed part of excess funds for financing programmed expenditures. In contrast, a negative ratio means that the NG's debt payments exceeded its borrowings. Source: National Government Cash Operations, BTr.

46 Based on BTr definition, domestic and external financing are measured at gross levels.

47 Data from 2022 to 2023 are based on the Consolidated Public Sector Financial Position (CPSFP) posted by the Department of Finance (DOF) on 19 January 2026, 4:00 PM, while data for 2024 to 2025 are based on the Budget of Expenditures and Sources of Financing (BESF) FY 2027 posted by the Department of Budget and Management (DBM) on 11 August 2026. The data on percent to GDP is based on the Department of Economic Statistics (DES) staff calculation using the latest nominal GDP released by the PSA.
